Course_Number:	1502Q
Section_Number:	007
PreLab_Number:	PL05
PL Q1:	from right plate to left, uniform, horizontal electric field from pos charged plate to a neg charged plate
PL Q2:	Capacitance is directly proportional to the surface area of the plates because larger plates can store more charge at the same potential difference, so ($C \propto A$).
PL Q3:	+ charge and -charge are acting in different ways (E and $oppE$) so they will create torque and this torque will rotate dipole
PL Q4:	they will reduce the electric field inside, because they will make their own small electric field in opp direction , so the voltage becomes smaller for the same charge, and the capacitance increases
